## Controlling the projector using a personal computer

This projector can be controlled by connecting a personal computer with RS-232C terminal.

### PC-controllable functions :

- Turning the power ON or OFF
- Changing input signals
- Inputting commands by pressing the buttons on the control panel and remote control
- Menu setting

### Connection

### Important:

- Make sure that your computer and projector are turned off before connection.
- Turn on the projector after the computer is started up.  
(If you do not follow this instruction, the Comport may not function.)
- Adapters may be necessary depending on the PC connected to this projector. Contact your dealer for details.

### 1) Interface

PROTOCOL	RS-232C
BAUD RATE	9600 [bps]
DATA LENGTH	8 [bits]
PARITY BIT	NONE
STOP BIT	1 [bit]
FLOW CONTROL	NONE

This projector uses RXD, TXD and GND lines for RS-232C control.  
For RS-232C cable, the reverse type cable should be used.

### 2) Control command diagram

The command consists of the address code, function code, data code, and end code. The length of the command varies among the functions.

	Address code	Function code	Data code	End code
HEX	30h 30h	Function	Data	0Dh
ASCII	'0' '0'	Function	Data	↵

- [Address code] 30h 30h (In ASCII code, '0' '0') fixed.  
 [Function code] A code of each fixed control move.  
 [Data code] A code of each fixed control data (number) and not always indicated.  
 [End code] 0Dh (In ASCII code, '↵') fixed.

### 3) Control sequence

- (1) Send the command from the personal computer to the projector. (The commands shall be sent at intervals of at least 400ms.)
- (2) The projector will send a return command 400ms\* after it receives an end code. If the command is not received correctly, the projector will not send the return command.
- (3) The personal computer checks the command and confirms if the sent command has been executed or not.
- (4) This projector sends various codes other than the return code. When having a control sequence by RS-232C, reject other codes from the personal computer.

\* : The sending time of return command may delay depending on the (operating conditions) during changing the input signal, etc.

[Example] When turning the power ON (Figures and symbols enclosed in quotation marks are ASCII codes.):

Sending commands from the PC, etc.	Status code from the projector	Description
30 30 21 0D '0' '0' '!' '↵'		Command for POWER ON
	30 30 21 0D '0' '0' '!' '↵'	Command receipt confirmation (Command echo back)

- Any commands will not be executed for 10 seconds after the power is turned on.

### 4) Operation commands

The operation commands are used for the basic operation setting of this projector. They may not be executed while the signals are changed. The operation commands have no data codes.

The keystone commands are used for the keystone setting of this projector with the value. The value will vary depending on the installation conditions, etc.)

ITEM	ASCII	HEX	VALUE
Vertical KEYSTONE	KS	4Bh 53h	<b>±45</b>
Horizontal KEYSTONE	KSH	4Bh 53h 48h	<b>±22</b>

**How to set the grade**

Use the ASCII codes to set the grade for setting data. Please refer to the table below for the HEX code.

9) **Reading command diagram**

The projectors operating status, such as POWER-ON / OFF and the currently selected input terminal, can be monitored.

	ASCII		HEX	
	Function	Data (Receive)	Function	Data (Receive)
POWER ON	vP	1	76h 50h	31h
POWER OFF	vP	0	76h 50h	30h
INPUT COMPUTER 1	vI	r1	76h 49h	72h 31h
INPUT COMPUTER 2	vI	r2	76h 49h	72h 32h
INPUT VIDEO 1	vI	v1	76h 49h	76h 31h
INPUT VIDEO 2	vI	v2	76h 49h	76h 32h

The PC sends the command without attaching the data code to it. On the other hand, the projector attaches to the received command it's current operating status as the data code and send it back to the PC.

[Example ] When checking the currently selected input terminal (when the INPUT VIDEO 1 is being selected) :

Sending commands from the PC, etc.	Status code from the projector	Description
30 30 76 49 0D '0' '0' 'v' 'I' '▣'		Command for checking the input terminal
	30 30 76 49 76 31 0D '0' '0' 'v' 'I' 'v' '1' '▣'	Check result ( VIDEO 1)

10) **Menu setting commands** (Not executable in stand-by mode, while the Splash screen is projected or the MUTE is executed.)

The menu setting commands are used for the menu setting of this projector. If the personal computer sends the command without attaching the data code, the projector attaches to the received command it's current setting value as the data code and send it back to the PC.
