

Make Your Next Installation Stand Out

The Mitsubishi Dual-Lamp Series—The Cornerstone of Your Next Installation

When the time comes to break ground or perform a site upgrade—finish it off with presentation hardware you can be proud of. For the Dual-Lamp 8000 Series, Mitsubishi has gone back to the drawing board and created a line of advanced, adaptable projectors that are designed for unique applications and demanding environments. The first series of dual-lamp projectors in our product line-up is ideal for installation with such features as:

- Geometric correction adjustments for projection on curved surfaces
- Continuous projection requiring only one hour of rest time per lamp per week
- Horizontal and vertical edge blending for seamless display and resolution expansion
- User-swappable optional color wheel tailored to either higher brightness or color accuracy
- 360 degree flexibility allows for projection on ceilings, floors—and everything in between
- Automated, self-cleaning air filter is reusable and reminds users when it needs rinsing
- Unique heat pipe design uses no moving parts and keeps the projector cool
- XGA, WXGA, and WUXGA resolution options available

Before the 8000 series, you probably never thought a projector could do so much—and handle so many situations. Call your local Mitsubishi dealer for a demo of the projectors that define Performance, Quality, Reliability, and Value.
